

Domestic Watermelon Production

Watermelon is grown across the United States and Central and South America to provide year-round supply for the US consumer. Multiple sources help us better understand top production areas and the volume they produce. The USDA Agriculture Census looks at land use among other characteristics, to identify where watermelon is being grown. USDA-AMS Market News offers more detail on the top production areas. Together, these resources paint a comprehensive picture of US watermelon production with half the states growing a commercial-scale crop.

ESTIMATED ANNUAL ACRES OF WATERMELON PRODUCTION

MONTHLY PRODUCTION OF DOMESTIC WATERMELON
